

PRESS RELEASE

As I am sure you are aware Ham Baker Limited acquired Adams Hydraulics Limited in January 2008 and since then has continued to operate the Business as a separate trading entity.

In order to allow the Ham Baker Group of Companies to continue in its objectives to offer its clients an ever more complete and competitively priced Design, Manufacture and Installation package for its comprehensive range of Water and Waste Water Products, we have taken the decision to merge Adams Hydraulics into Ham Baker Flow Control and rename the Business Ham Baker Adams Ltd.

The driving force behind our decision to merge the two businesses is intentionally simple and to a great extent in response to the continuing demands of our valued customers and suppliers. That is: to ensure our customers and suppliers continue to receive the same level of technical and commercial support from the same industry experts and in addition have the opportunity to benefit from the consolidation of a wider range of products from a single source post merger.

All existing contracts and all contracts processed before 1st October 2010 will continue to be processed through Adams Hydraulics Ltd and Ham Baker Flow Control Ltd, with new Contracts processed via Ham Baker Adams Ltd after 1st October 2010.

Although Ham Baker Flow Control and Adams Hydraulics have separate histories, they have always shared a common objective: to ensure absolute customer satisfaction. We remain dedicated to this objective now that we are operating as one. Your existing sales, service, and support contacts remain unchanged, so you can use the same communication channels with which you are accustomed.

Rest assured the merger will cause no disruption to our customer service and we will continue working hard to earn your business. I want to personally thank you for your loyalty and support. If you have questions, please don't hesitate to contact me directly.

For the purposes of clarity this will not affect Ham Pipelines Limited which will continue to trade in its current format.
